After

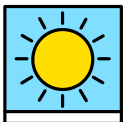

spring

comes the

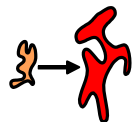

summer.

The

days

become

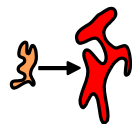

longer.

The

nights

become

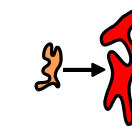

shorter.

The

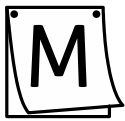

weather

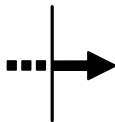

becomes

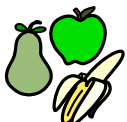

warmer.

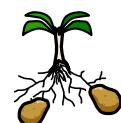

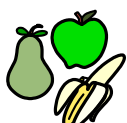

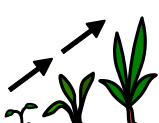

The months of summer are June, July and August.

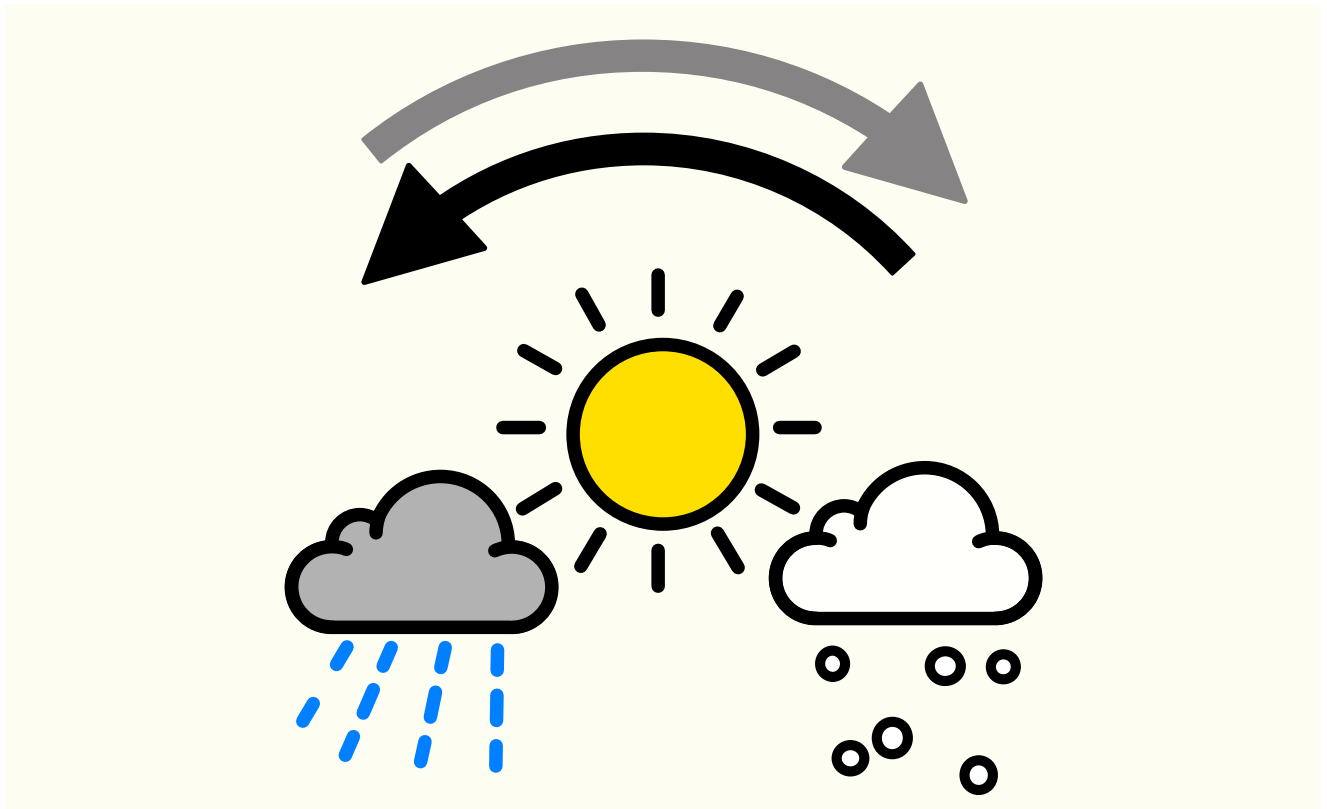

Trees and plants continue to grow.

Trees grow fruits and nuts.

Plants grow seeds, fruits and tubers.

 Summer
  weather
  can
  be
  very changeable.

 In summer it
  can
  be
  very hot
  and sunny.

 In summer it
  can
  rain
  and even hail.

 Summer
  storms
  have
  thunder
  and lightning.

Flowers

bloom

during

the summer.

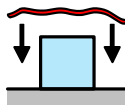

Daisies

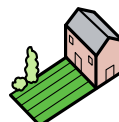

and

wild flowers

cover

lawns

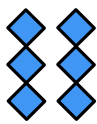

and

fields.

Flowers

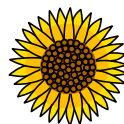

like

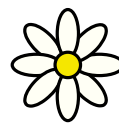

roses

and

sunflowers

bloom

in

gardens.

The

trees

begin

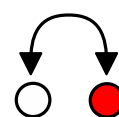

to

grow

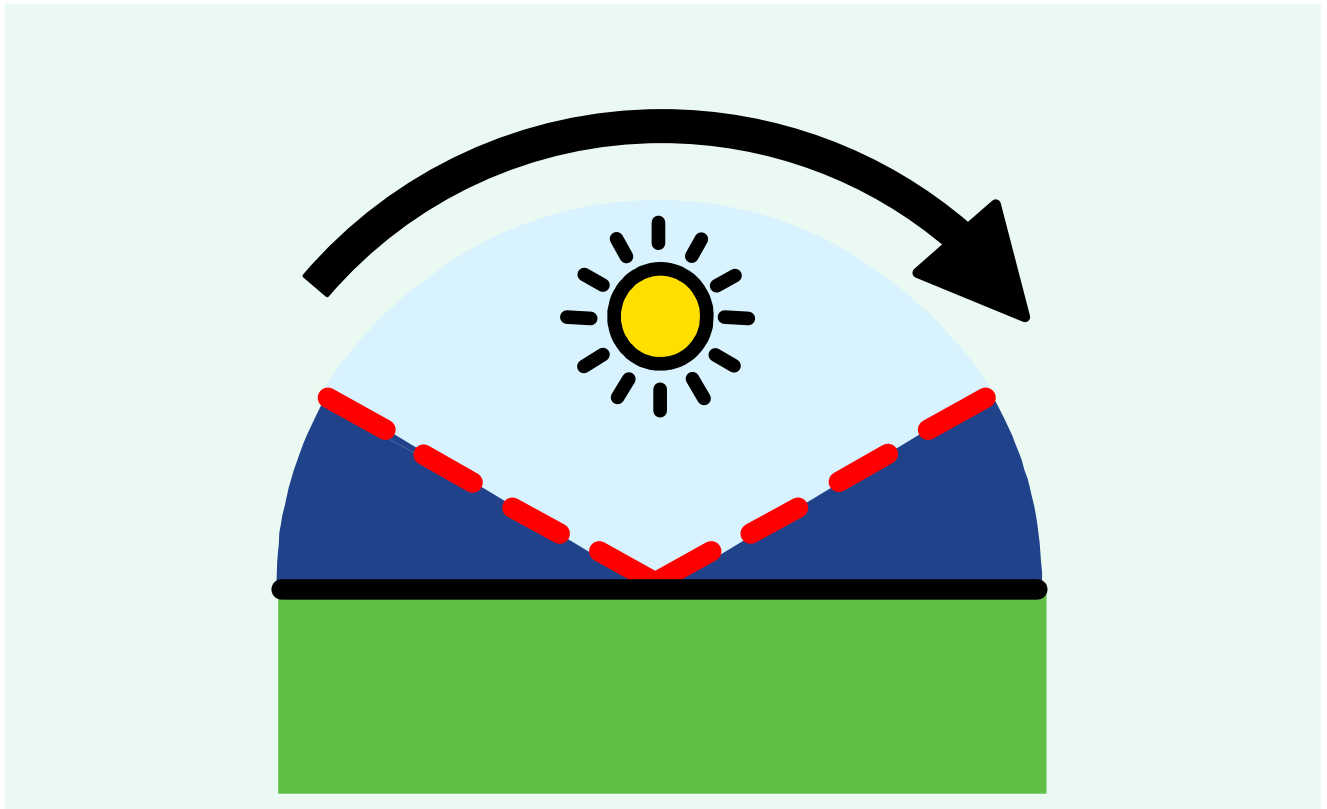

fruits

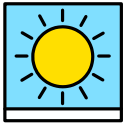

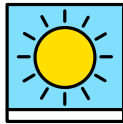

or

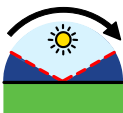

nuts.

 The days become longer in the summer.

 The longest day is called Midsummer's Day.

 Midsummer's Day is in the third week in June.

 Afterwards the days begin to get shorter again.

Flowers

attract

insects

throughout

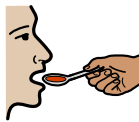

the

summer.

They

feed

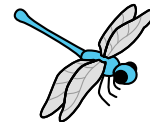

bees,

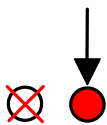

butterflies

and

dragonflies.

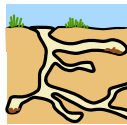

Other

insects

live

underground.

These

include

ants,

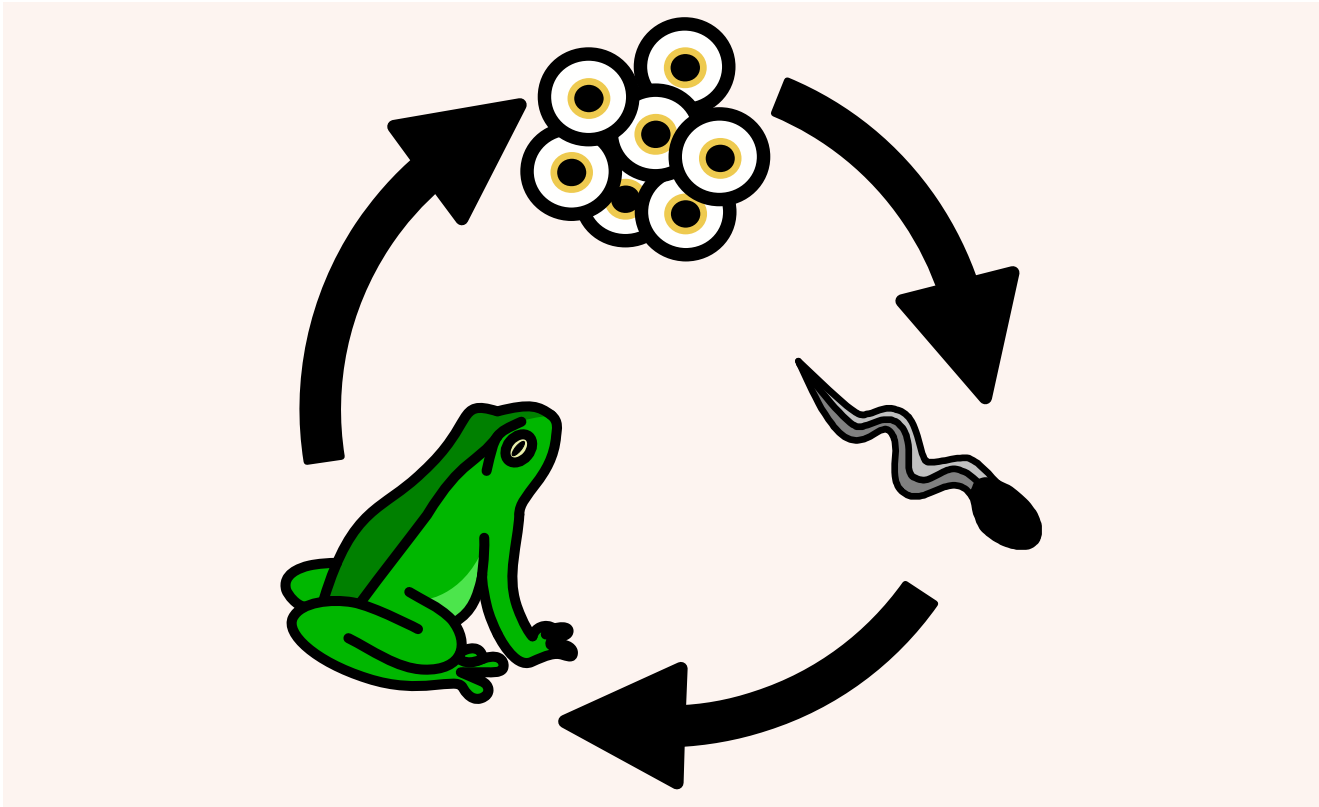

centipedes

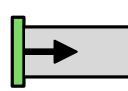

and

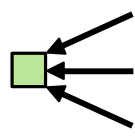

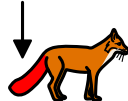

beetles.

to

legs

in

summer.

and

their

tail.

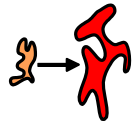

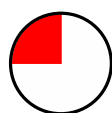

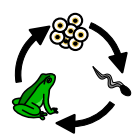

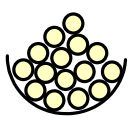

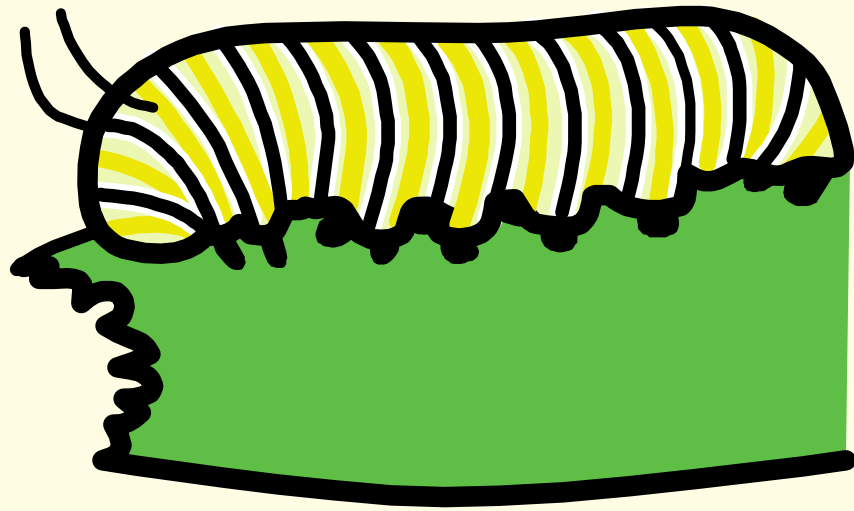

and

the

water
 =

 froglets.

are

the

life cycle of a frog.

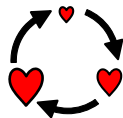

Many

insects

have

life cycles.

Moths

and

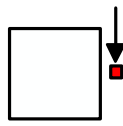

butterflies

hatch

as

tiny

caterpillars.

The caterpillars feed on leaves and flowers.

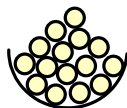

Caterpillars

eat

a

lot

and

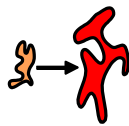

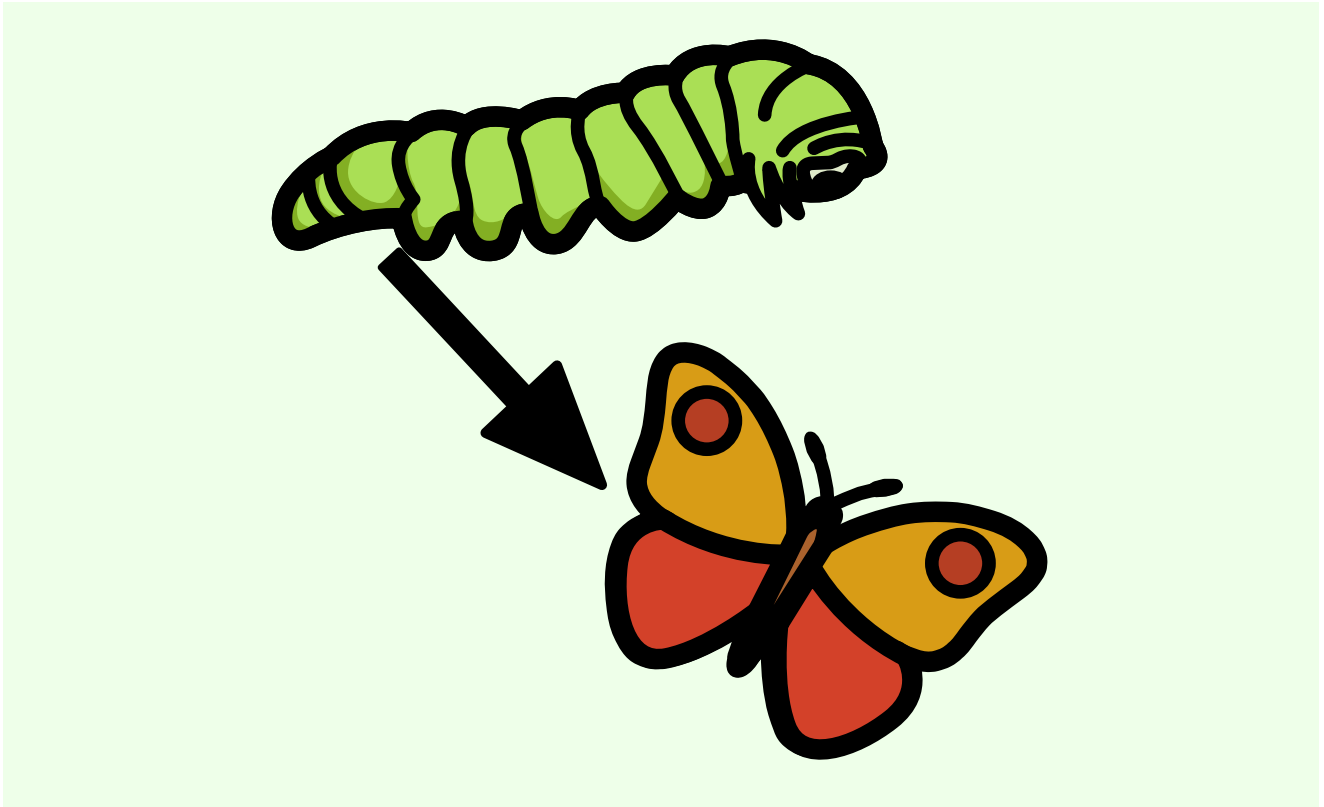

grow

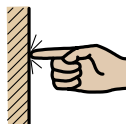

very

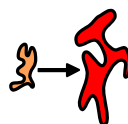

quickly.

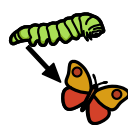

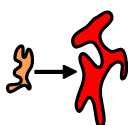

The caterpillar then turns into a pupae.

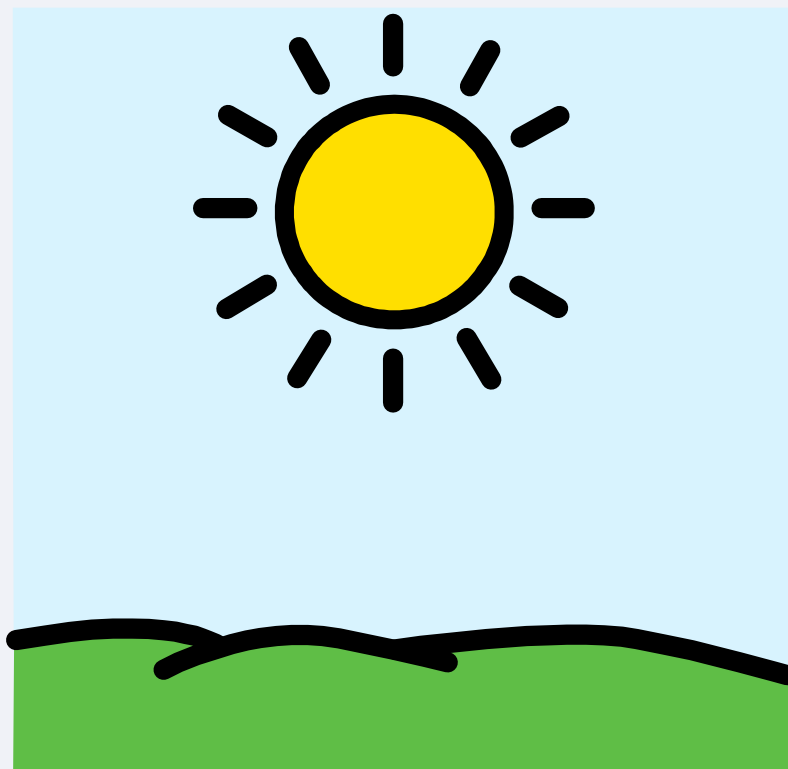

The pupae becomes a hard protective shell.

Inside the pupae the caterpillar changes into a butterfly.

These changes are called metamorphosis.

Trees

grow

fruits

and

nuts

in

summer.

Crops

and

vegetables

grow.

Crops

grow

during

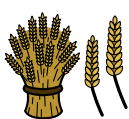

the

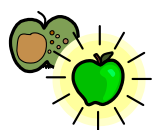

long,

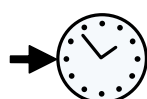

sunny days.

Crops

ripen

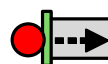

until

they

are

ready

to

harvest.
